

# Metrology lab

E1027

	Device name : Vernier Caliper
	Function: a precision instrument that can be used to measure internal and external distances extremely accurately.
	Experiment name : linear measurements
	Device name : Height Gauge
	Function: a measuring device used either for determining the height of objects, or for marking of items to be worked on.
	Experiment name : linear measurements
	Device name : outside micrometer
	Function: a tool used for the precise measurement of very small objects. A micrometer can measure the length and thickness of whatever object fits between its anvil and spindle.
	Experiment name : linear measurements

	<p>Device name : Depth gauge</p> <p>Function: a tool used for the precise measurement of the depth.</p> <p>Experiment name : linear measurements</p>
	<p>Device name : Universal Bevel Protractor</p> <p>Function: a measuring instrument, typically made of transparent plastic or glass, for measuring angles. Most protractors measure angles in degrees (<math>^{\circ}</math>)</p> <p>Experiment name : Angular Measurements</p>
	<p>Device name : Combination Set</p> <p>Function: The combination set consists of scale, squaring-head, protractor and centre-head. It consists of a heavy scale, which is grooved all along its length. It is on this groove that sliding squaring head is fitted.</p> <p>Experiment name : Angular</p>

	<p>Device name :telescoping gauges</p>
	<p>Function: a measuring tool with spring-loaded plunges used together with a micrometer to measure the inside of holes or bores. Telescoping gauges are made insets to measure from small to very large bores.</p>
	<p>Experiment name :Standard gauges</p>
	<p>Device name :Thread Gauge</p>
	<p>Function: These gauges are used to measure screw threads and calibrate gauges.</p>
	<p>Experiment name :Standard gauges</p>
	<p>Device name :Radius Gauge</p>
	<p>Function: These gauges are used to measure the radiuses for any part of a circle.</p>
	<p>Experiment name :Standard gauges</p>

	<p>Device name :feeler Gauge</p>
	<p>Function: These gauges are used to measure the clearance between any parts of a machine.</p>
	<p>Experiment name :Standard gauges</p>
<p>Device name : Block gauges</p>	<p>Function: Blocks of metal that have been crafted with extreme precision to exact lengths of units of measure, used for linear measurement.</p>
<p>Device name : Strain gauge technology</p>	<p>Experiment name : Block gauges</p>
<p>Function: To achieve the experimental stress analysis of components under simple mechanical load situations, that is for tension/compression, bending and torsion.</p>	<p>Device name : Strain gauge technology</p>
<p>Experiment name : Strain Gauges</p>	<p>Experiment name : Strain Gauges</p>
